

## Krytox™ GPL 205 helps Bloggers and Gamers

People, who spend several hours a day writing or playing on a computer keyboard, develop quite a good sense for the feel and “tactile feedback” of the buttons. Most times they quickly develop special preferences and demands on the keyboard. Chemours fluorinated lubricant Krytox GPL 205 can help meeting those requirements.

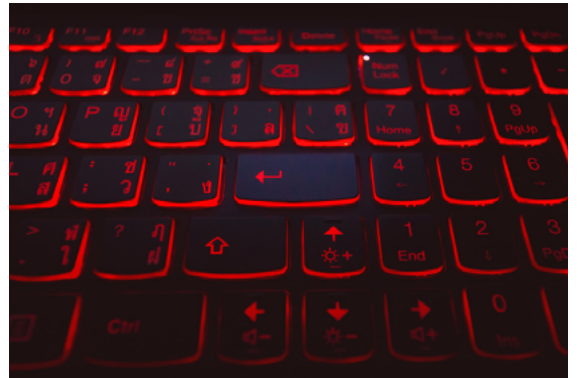

Krytox™ GPL 205 has been in the market for more than 50 years now and has been used in almost all demanding industrial areas. One of its main application fields is to eliminate squeak and rattle noises in vehicle interiors.

Due to its outstanding properties like high compatibility with almost all materials, low volatility and a very long service life Krytox™ GPL 205 has gained a high reputation in this branch.

This reputation and the long lasting success in numerous applications has made clever gamers test Krytox™ GPL 205 to optimize the tactile properties of single buttons on a high-end-gaming keyboard.

The result exceeded all expectations placed on that material. Not only the tactile properties had been improved but also the effort to strike the key until the actuation point and the whole key travel mechanism. Moreover, the keys could be operated a lot more smoothly.

After Krytox™ GPL 205 had become very popular among gamer circles, also companies specialized in equipment and tuning parts for high-quality keyboards have decided to include this product in their portfolio.
